The Orca Inventory system delivers a cutting edge, powerful and robust program that is unrivaled both in cost savings and ease of use.

Average savings of 5%,
We have results up to 15%!

Average COGS Savings Chart

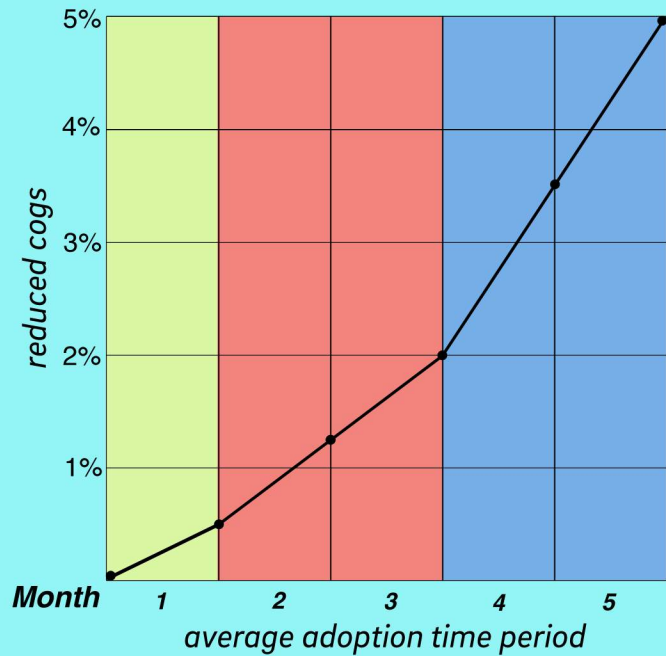

“ The results have been staggering! In one month the difference was almost \$20,000. Great customer service!

-Tim Wilson (F&B Dir.) Spearmint Rhino

“ We could not be more impressed with it. It's helped us keep cost down and track spending in ways I didn't think possible.

-Larry Pollack (President) Saddle Ranch

Average cost savings over a 5 month period

Month 1

Savings average of .5%. Achieved during user set up. The simple act of organizing makes ordering more efficient, creates less waste, and exposes excessive products on hand. Pricing and pack sizes are established for true value of vendor price comparison. Poor recipe costs are discovered from price increases of inventory over time.

Months 2-3

2% reduction off the cost of goods. Directly related to using a budget before making an order. Projected sales allows for real time food or beverage cost. Know your cost before the order is sent. Greater reductions come from taking advantage of Orca's intelli-order which reduces excessive ordering and inventory levels with hard math based on historic usage and sales. Utilizing Orca's Receiving section enables the user to create additional savings by holding the vendors accountable.

Months 4+

The greatest reduction of cost comes from exposing what is walking out the door and managing it. Orca will expose all portioning / waste / and theft issues. Orca customers have seen up to 15% in this area alone.

Savings Calculator

Per \$500,000 (x) Avg Savings (5%) = \$25,000 Save

Your Net Profit + \$25,000 = New Net Profit
